# Roof Trusses

Roof trusses are the most widely used form of framing in the UK as they provide a cost effective and flexible design solution. Not only the “norm” for simple roof structures but also increasingly the only method of framing to turn an architectural vision into a working roof structure.

Roof trusses hugely reduce the amount of time spent installing the structural elements of the roof compared to traditional build methods. Our speed of manufacture allows just in time delivery to site and therefore negates the need for large storage space on site.

Pasquill have over 80 designers, located throughout the UK at our network of design offices. They enable us to provide true national coverage with local knowledge and service.

We have worked hard to ensure consistent quality from all of our manufacturing sites and are proud to be able to offer CE marking on all of our roof trusses.

## Features and Benefits

- Packaged as required to meet delivery programme
- Site drawing pack with each delivery
- Clear labelling of packs to aid swift site erection
- Close communication between transport personnel and site staff
- Scheduled deliveries nationwide
- Safe Systems of Work provided for unloading

## Pasquill's Complete Roof Package:

- Roof trusses & gable ladders
- Bracing and ancillary timbers
- Metalwork
- Spandrel Panels

## Our Commitments

We take our commitments to our customers, staff and the environment very seriously and ensure that we put in place procedures to meet our obligations through our certification, accreditations and associations.
